EDUCATION

Texas A&M University

Master of Science - Computer Engineering

College Station, Texas

Expected August 2026 – May 2027

Texas A&M University

Bachelor of Science - Computer Engineering | GPA: 3.86

College Station, Texas

August 2022 – May 2026

EXPERIENCE

H-E-B

Customer Service Associate

College Station, Texas

June 2020 – Present

- Processed 50+ sales transactions per shift with 100% accuracy, ensuring positive checkout experiences.
- Resolved customer issues to support a 10+ person team and maintain smooth store operations.

Arrow

Software Development Intern

Remote

May 2024 – August 2024

- Delivered an admin app supporting 1,000+ users by developing React frontend features aligned with Figma designs.
- Integrated Firestore and Firebase Database to enable real-time updates and improve data reliability.
- Partnered with a 2-person team to launch production-ready features on schedule, improving moderation workflows.
- Reduced deployment issues by streamlining workflows with Git, Jira, and Firebase.

PROJECTS

Wall-Climbing Robot

Raspberry Pi | Python | Onshape CAD

College Station, Texas

February 2025 - May 2025

- Designed and built a wall-climbing robot powered by a brushless motor and propeller mounted on a lightweight 3D-printed chassis.
- Integrated a Raspberry Pi running Python with an Electronic Speed Controller circuit and custom power wiring.
- Generated sufficient thrust to maintain stable wall adhesion, enabling the robot to traverse vertical surfaces.

8-bit Pipelined Adder with a Buffered H-Clock Tree

Cadence Spectre | Cadence Virtuoso

College Station, Texas

February 2025 - May 2025

- Designed schematics and layout for NAND, XOR, and inverter logic gates; performed transient and AC analysis to calculate parameters such as input gate capacitance and propagation delay.
- Integrated logic gates and D flip-flops to develop the schematic and layout.
- Applied the Logical Effort method to optimize delay by strategically resizing transistors along the critical path.

64-bit Single-Cycle Processor (RTL Design and Verification)

Verilog | GTKWave | ModelSim

College Station, Texas

August 2024 - December 2024

- Designed and implemented a 64-bit single-cycle processor in Verilog, following the ARMv8-A instruction set architecture and RTL design methodology.
- Built core processor components, including the ALU, data memory, next PC logic, register file, sign extender, and control unit.
- Developed custom testbenches and used ModelSim for simulation and GTKWave for waveform analysis and debugging.

ACTIVITIES/LEADERSHIP

Freshman Reaching Excellence in Engineering (F.R.E.E.)

Social Committee Member 23', Counselor (Service Committee) 24'

College Station, Texas

October 2022 – May 2024

- Organization oriented towards developing leadership, social, and professional skills, with additional focus in the engineering field.
- Guided members through the first year of college, by providing experience and leadership while coordinating with 15+ counselors and executives.

SKILLS

Technical Skills: Verilog, SystemVerilog, Cadence Virtuoso, Xilinx Vivado, Assembly, Python, C++, React, Javascript

Relevant Coursework: Digital Integrated Circuit Design (Graduate level), Hardware Design Verification, Computer Architecture, Electrical Circuit Theory, Signals and Systems, Microcomputer Systems, Data Structures and Algorithms
